Website Estimator/Quote for Clients
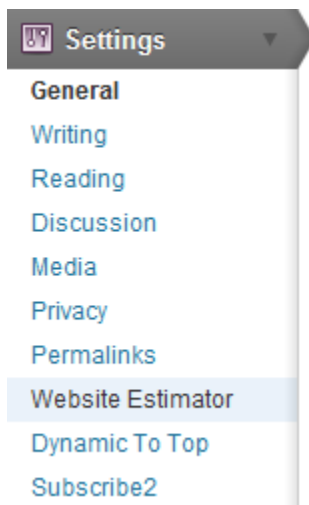

These scripts are provided at a low cost but require a lot of work! PLEASE take a second to rate on Code Canyon and tweet it to your friends. Also if you like mind-blowing scripts subscribe to my Code Canyon feed. I have some really cool things coming down the pipeline!

- *The goal* of the website estimator is to create an easy way for any client coming to your site to get an instant quote.
    - The estimator is customizable and very well commented/documented.
    - Included are videos on how to customize and implement the code.
    - Basic knowledge of JavaScript, jQuery and HTML is required.

- *UPDATE:* 11/26/11 –NEW currency variable created. Use this to change the currency symbol.
- *UPDATE:* 11/25/11 –The updates include a PHP contact form and PayPal link up. I have also updated the documentation on how to remove PayPal if you don't want it.
- Bug Fixes: 11/25/11 – Issue when clicking No in the widgets would keep subtracting from the total.
- Bug Fixes: 11/25/11 Issue when opening page date was 10 days plus current date but not switching months.

SETUP:

You must setup the variables in the settings panel. Click on "Settings" in the WordPress left and then choose "Website Estimator."

IMPLEMENTAION:

Use shortcode: [webEstimator]

You will need to add it to a page without a sidebar and a small left margin.
